085804.015201 (U.S. Patent Application No. 10/782,466)

**CURRENTLY PENDING CLAIMS**

1. (Previously presented) A method comprising:  
generating a first phase of a multiphase advertisement, the multiphase advertisement including a streaming media component, the first phase including a graphical interface having a first dimension;  
generating a second phase of the multiphase advertisement in which the graphical interface has a second dimension that is different from the first dimension of the first phase, in the second phase of the multiphase advertisement the graphical interface includes a streaming media component space;  
building the streaming media component using a software player engine in accordance with a predefined design of the multiphase advertisement's graphical interface by which at least a set of core media player variables and a set of core media player controls are predefined, the streaming media component including a link to streaming media content; and  
incorporating the streaming media component into the streaming media component space of the graphical interface in the second phase of the multiphase advertisement, so that the streaming media component is made available to experience the streaming media content in the second phase of the multiphase advertisement's graphical interface.
2. (Previously Presented) The method according to claim 1, wherein the content to be experienced via the streaming media component is streaming video.
3. (Previously Presented) The method according to claim 1, wherein the content to be experienced via the streaming media component is streaming audio.
4. (Original) The method according to claim 1, wherein the first graphical interface is an animated display.

5. (Original) The method according to claim 4, wherein the animated display of the first graphical interface uses vector-based animated graphics.
6. (Original) The method according to claim 1, wherein the first graphical interface of the first phase includes a toolbar, the toolbar including at least a link to trigger the second phase.
7. (Original) The method according to claim 6, wherein the link to trigger the second phase also launches the streaming media component.
8. (Original) The method according to claim 6, wherein the multiphase advertisement relates to a motion picture and wherein the toolbar includes at least a link to a trailer of the motion picture.
9. (Original) The method according to claim 6, wherein the multiphase advertisement relates to a motion picture and wherein the toolbar includes at least a link to still images of scenes from the motion picture.
10. (Original) The method according to claim 6, wherein the multiphase advertisement relates to a motion picture and wherein the toolbar includes at least a link to a streaming video of scenes from the motion picture.
11. (Original) The method according to claim 6, wherein the multiphase advertisement relates to a motion picture and wherein the toolbar includes at least a link to a streaming video of interviews of actors or actresses from the motion picture.
12. (Original) The method according to claim 6, wherein the multiphase advertisement relates to a motion picture and wherein the toolbar includes at least a link to an interactive interface for purchasing tickets to view the motion picture at a theater.

13. (Original) The method according to claim 6, wherein the toolbar includes at least a link to content about the subject of the multiphase advertisement.
14. (Original) The method according to claim 6, wherein the toolbar includes at least a link to an interactive form for contacting a second user about the subject of the multiphase advertisement.
15. (Original) The method according to claim 14, wherein the interactive form includes a field for inputting an electronic mail address of the second user.
16. (Original) The method according to claim 15, wherein, upon submission of the interactive form, an electronic mail is transmitted to the electronic mail address of the second user with information about the subject of the multiphase advertisement.
17. (Original) The method according to claim 1, wherein the set of media player variables includes a video size.
18. (Original) The method according to claim 1, wherein the set of media player variables includes a stream bandwidth.
19. (Original) The method according to claim 1, wherein the set of player controls includes a play control and a stop control.
20. (Original) The method according to claim 1, wherein the streaming media content is remotely stored on a streaming server, and wherein the streaming media component includes a stream identifier that is passed to the streaming server to retrieve the streaming media content.

21. (Previously Presented) A method comprising:  
providing a first phase of a graphical interface including at least a first interactive component for triggering a second phase, the graphical interface having a first dimension in the first phase;  
providing a second phase of the graphical interface that is launched in response to interaction with the first interactive component, in the second phase the graphical interface having a second dimension that is different than the first dimension of the graphical interface and a streaming media component space; and  
providing at least one streaming media component integrated in the graphical interface in the second phase, so that the streaming media component is made available to experience streaming media content in the second phase graphical interface.
22. (Original) The method in claim 21, wherein the first interactive component is a dynamic vector graphic.
23. (Original) The method in claim 21, wherein the first interactive component is an embedded streaming graphic.
24. (Original) The method in claim 21, wherein the first interactive component is hyperlink.
25. (Original) The method in claim 21, wherein the first interactive component is a button having a graphic.
26. (Original) The method of claim 21, wherein the first interactive component is a graphical toolbar including at least one hyperlink for triggering a second phase graphical interface of the multiphase advertisement.
27. (Canceled)
28. (Previously Presented) The method of claim 21, wherein the streaming media component includes a link to streaming video content.

29. (Previously Presented) The method of claim 21, wherein the streaming media component includes a link to streaming audio content.
30. (Original) The method of claim 21, wherein the first phase graphical interface further comprises a graphical toolbar enabling a user to access additional advertisement information.
31. (Original) The method of claim 30, wherein the graphical toolbar includes one or more hyperlinks.
32. (Original) The method of claim 30, wherein the graphical toolbar includes one or more graphical buttons.
33. (Previously presented) A system comprising:  
one or more processors to execute:  
software permitting the generation of a first phase and a second phase of a multiphase interactive graphical advertisement that includes an embedded streaming media component, the first phase having a first graphical dimension and the second phase having a second graphical dimension wherein the first graphical dimension and the second graphical dimension are different, the second phase including at least a streaming media component space for integration of the streaming media component; and  
a player engine for incorporating the streaming media component into the streaming media component space of the second phase, the player engine including a core set of media player variables and a core set of media player controls for customizing the streaming media component, so that the streaming media component is made available to experience streaming media content in the second phase of the multiphase graphical advertisement.

34. (Previously Presented) A multiphase interactive advertisement, comprising:  
a first phase of the multiphase interactive advertisement comprising a graphical interface;  
a second phase of the multiphase interactive advertisement, in the second phase the  
graphical interface including at least a streaming media component space, and  
having a dimension that is different than a dimension of the first phase; and  
a streaming media component incorporated into the streaming media component space of  
the second phase, so that the streaming media component is made available to  
experience streaming media content in the second phase of the multiphase  
advertisement's graphical interface;  
wherein the second phase of the multiphase interactive advertisement is triggered by an  
action performed on the first phase of the multiphase interactive advertisement.
35. (Original) The multiphase interactive advertisement of claim 34, wherein the first phase  
further includes a toolbar, the toolbar including one or more graphical buttons enabling a  
user of the multiphase interactive advertisement to interact with one or more features of  
the multiphase interactive advertisement.
36. (Original) The multiphase interactive advertisement of claim 35, wherein interaction  
with one of the graphical buttons provides further information about the subject of the  
multiphase interactive advertisement.
37. (Original) The multiphase interactive advertisement of claim 35, wherein interaction  
with one of the graphical buttons triggers the second phase.
38. (Original) The multiphase interactive advertisement of claim 35, wherein the action  
facilitates the user to purchase a product or service that is the subject of the multiphase  
interactive advertisement.
39. (Original) The multiphase interactive advertisement of claim 34, wherein the second  
phase is triggered by a mouse over of the first phase.

40. (Original) The multiphase interactive advertisement of claim 34, wherein the second phase is triggered by mouse click on an area of the first graphical interface of the first phase.
41. (Original) The multiphase interactive advertisement of claim 34, wherein the second phase is triggered by mouse clicking a graphical button on the first graphical interface of the first phase.
42. (Original) The multiphase interactive advertisement of claim 34, wherein the second phase is triggered by mouse clicking a hyperlink on the first graphical interface of the first phase.
43. (Previously Presented) A multiphase interactive advertisement comprising:
  - a first phase of the multiphase interactive advertisement that is incorporated into a web page, in the first phase a vector-based graphical animation runs in the multiphase interactive advertisement's graphical interface upon launch of the web page, the graphical interface having a first dimension in the first phase;
  - a second phase that is launched upon completion of the vector-based graphical animation of the first phase, in the second phase the multiphase interactive advertisement's graphical interface has a second dimension that is smaller than the first dimension of the first phase, and in the second phase the graphical interface includes a toolbar for permitting a user to interact with the second phase of the multiphase interactive advertisement;
  - a third phase in which the multiphase interactive advertisement's graphical interface includes at least a streaming media component space, and in the third phase the graphical interface has a dimension that is larger than the second dimension of the second phase; and
  - a streaming media component incorporated into the streaming media component space of the third phase, so that the streaming media component is made available to experience streaming media content in the third phase of the multiphase interactive advertisement's graphical interface;

wherein the third phase of the multiphase interactive advertisement is triggered by an action performed on the second phase of the multiphase interactive advertisement.

44. (Previously Presented) A multiphase interactive advertisement comprising:  
a first phase of the multiphase interactive advertisement that is incorporated into a web page and comprises a first graphical interface that includes a graphical display visible upon launch of the web page, the graphical interface having a first dimension in the first phase;  
a second phase that is dynamically launched after a period of time, in the second phase the multiphase interactive advertisement's graphical interface has a second dimension that is smaller than the first dimension of the first phase, and in the second phase the graphical interface includes a toolbar for permitting a user to interact with the second phase of the multiphase interactive advertisement;  
a third phase in which the multiphase interactive advertisement's graphical interface has a dimension that is larger than the second dimension of the second phase; and  
wherein the third phase of the multiphase interactive advertisement is triggered by an action performed on the second phase of the multiphase interactive advertisement.
45. (Previously Presented) The multiphase advertisement of claim 44, wherein in the third phase the multiphase interactive advertisement's graphical interface includes at least a streaming media component space and wherein a streaming media component is incorporated into the streaming media component space of the third phase, so that the streaming media component is made available to experience streaming media content in the third phase of the multiphase interactive advertisement's graphical interface.
46. (Previously presented) A computer-readable storage medium containing a set of instructions for a general purpose computer, the instructions comprising:  
a core set of player controls for controlling streaming media of a streaming media presentation;  
a core set of player variables for customizing the streaming media of the streaming media presentation;

a vector-based graphical development application program accessible via the computer to enable a user to specify a graphical interface design for a streaming media presentation prior to publication of the graphical interface, the core set of player controls and player variables operative with the vector-based graphical development application program to:

enable a user to insert a selected set of player controls from the core set of player controls including at least a streaming media player display interface by dragging and dropping the selected set of player controls onto a graphical representation;

enable the user to set one or more of the player variables of the core set of player variables;

enable the user to select the streaming media using a stream identifier that identifies streaming media; and

enable the user to design other graphical features of the streaming media presentation;

wherein, when the streaming media presentation's graphical interface is launched in accordance with the user-inserted set of player controls including at least a streaming media player display interface and the one or more player variables set by the user, the stream identifier is passed to a backend streaming media content management system that locates and retrieves the associated streaming media and passes the streaming media to the streaming media player display interface so that the streaming media can be experienced in accordance with the user-specified design of the streaming media presentation's graphical interface.

In re Application of: A. Florschuetz

Examiner: O. Abdul-Ali

U.S. Application No.: 10/782,466

Art Unit: 2178

Filing Date: February 19, 2004

Docket No.: 085804.015201

For:

Interactive Graphical Interface Including a Streaming Media Component  
and Method and System of Producing the SameCommissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450**PROPOSED AGENDA**

Sir:

This PROPOSED AGENDA is an agenda that we would like to discuss in a brief telephonic interview with yourself and your supervisor, Examiner Hong.

1. Discuss currently pending independent claims of Applicant's Patent Application (Serial No. 10/782,466) (currently pending claims are attached).

2. Discuss cited prior art - U.S. Patent No. 7,117,439 (Barrett)

Respectfully submitted,

Date: May 6, 2009
